EDUCATION

Nanyang Technological University

Aug'25 - May'29

Computer Engineering Undergraduate | cGPA: 4.76/5.00 (Highest Distinction)

EXPERIENCE

SINGAPORE PRISON SERVICE

May'26 – Aug'26

Prison Visit Management – RPA Intern

- Analysed the existing manual visit-management process and proposed an automated workflow, built with UiPath and Microsoft Power Automate, saving ~2 hours of manual work every day.
- Collaborated with stakeholders to identify automation opportunities, redesign workflows, and implement scalable solutions that reduced manual intervention, increased process reliability, and optimized manpower utilization.

OCBC BANK

Feb'26 - Apr'26

Group Legal & Compliance – Intranet Revamp Intern

- Revamped the existing Group Legal & Compliance SharePoint site, restructuring navigation and consolidating content from 5 departments into one site.
- Supported testing, refinement, and phased rollout, preparing documentation and training materials to drive user adoption and ensure long-term maintainability.

TECHNICAL TEAMS & COMPETITIONS

Mecatron (Autonomous Underwater Vehicle) | NTU

Aug'26 – Present

- Develop the navigation system for the USV in ROS 2, designing behaviour trees that sequence mission tasks and handle failures, in preparation for RobotX.
- Own the navigation task within the team, testing and iterating on mission behaviour through simulation and pool testing.

DeepSpeed (Autonomous Racing Team) | NTU

Mar'26 – Present

- Developed the autonomous stack for a 1/10-scale F1TENTH race car in ROS 2, covering LiDAR-based SLAM, global path planning and PID control, and assembled the car hardware.
- Placed 16th of 55 teams at IFAC Busan, using practice-run data analysis to tune the car's performance.

RESEARCH & PROJECTS

NTU URECA (Undergraduate Research)

Qwen 2.5-vl, RAG, Qdrant

Locally-run AI tutor that reads photos of physics problems and guides students to the answer with Socratic questions instead of handing it over. Built the RAG pipeline with Qdrant retrieval and a self-hosted Qwen model in LM Studio, grounding hints in course material.

Image Deblurring ML Model | [Link](#)

Python, PyTorch, OpenCV

Trained an end-to-end image deblurring model on the GoPro Deblur dataset using a U-Net style encoder decoder with skip connections, enhanced with CSFF (cross-stage feature fusion) and SAM (supervised attention module) attention to progressively refine multi-scale features for sharper reconstructions.

Shady – Google Maps Chrome Extension | [Link](#)

TypeScript, JavaScript, Google Routes API

Developed a Chrome extension that integrates the Google Routes API with real-time solar positioning to recommend the optimal side of a vehicle to sit on, improving passenger comfort by minimizing direct sunlight exposure.

HONOURS & AWARDS

- *Dean's List AY25-26*
- *JEE Advanced (2022) All India Rank – 2170*
