

Sarvajana Hari

Mobile: +65 8158 0865 | Nationality: Singaporean | Nanyang Global Merit Scholar | [Email](#) | [Github](#) | [LinkedIn](#)

EDUCATION

Nanyang Technological University (Singapore)

Aug'25 - May'29 (Expected)

Full-Time Computer Engineering Undergraduate | cGPA: 4.76/5.00

EXPERIENCE

SINGAPORE PRISON SERVICE

May'26 – Present

Prison Visit Management – RPA Intern

- Developed end-to-end RPA solutions using UiPath and Microsoft Power Automate, integrating enterprise systems to automate high-volume administrative workflows and improve process turnaround times.
- Collaborated with stakeholders to identify automation opportunities, redesign workflows, and implement scalable solutions that reduced manual intervention, increased process reliability, and optimized manpower utilization.

OCBC BANK

Feb'26 - Apr'26

Group Legal & Compliance – Intranet Revamp Intern

- Redesigned the SharePoint intranet architecture for the Group Legal & Compliance division, consolidating content across five departments to improve structure, navigation, and information accessibility.
- Supported testing, refinement, and phased rollout, preparing documentation and training materials to drive user adoption and ensure long-term maintainability.

LEADERSHIP & ACTIVITIES

F1TENTH Autonomous Racing Team | NTU

Mar' 26 – Present

Linux | Docker | ROS2 | LiDAR | SLAM | PID control | Reactive Methods | Global Planning

- Developed and refined autonomous navigation strategies through iterative testing, improving racing performance, obstacle avoidance, and vehicle stability.
- Competed at the IEEE ICRA, working closely with teammates to debug, validate, and deploy race-ready software

PROJECTS

Image Deblurring ML Model | [Link](#)

Python, PyTorch, OpenCV

Trained an end-to-end image deblurring model on the GoPro Deblur dataset using a U-Net style encoder decoder with skip connections, enhanced with CSFF (cross-stage feature fusion) and SAM (supervised attention module) attention to progressively refine multi-scale features for sharper reconstructions.

Shady – Google Maps Chrome Extension | [Link](#)

TypeScript, JavaScript, Google Routes API

Developed a Chrome extension that integrates the Google Routes API with real-time solar positioning to recommend the optimal side of a vehicle to sit on, improving passenger comfort by minimizing direct sunlight exposure.

SKILLS

Programming Languages: Python, C/C++, Java, TypeScript, SQL, R, Swift

AI & Data Science: TensorFlow, Machine Learning, Deep Learning (CNNs)

Robotics & Systems: ROS 2, Docker, Linux

Frameworks & Tools: React, Flask, Git, GitHub, Microsoft Power Automate, WordPress

HONOURS & AWARDS

- *NTU Honours College*
- *JEE Advanced (2022) All India Rank – 2170*
